

Health IT Feedback

Of the four goals, two of them (3 and 4) appear to be means to other goals. I would recommend keeping goals 1 and 2, adding a goal about improving equity - of health, care delivery and access – and moving objectives of current goals 3 and 4 within those three goals. If advancing technology and research is a goal for other reasons (economic?) you could add a goal about improving the efficiency of the health system, controlling costs of healthcare and/or maintaining the U.S. reputation in research/technology.
