

Comments on Goal 3

I highly recommend including more language on inclusion of health data in the public health sector for public health PRACTICE use. I suggest places that language might apply in Goal #3 objectives. This lines up with the CDC Modernization efforts in our public health sector that can ensure data are available to those working on population health improvement and in public health practice.

CURRENT GOAL -

Goal 3:

Objectives -

-Researchers and other health IT users have appropriate access to health data to drive individual and population health improvement

-Individual and population-level research and analysis are enhanced by health IT

-Researchers advance health equity by using health data that includes underrepresented groups

SUGGESTED CHANGES IN GOAL OBJECTIVES –

-Researchers, **practitioners**, and other health IT users have appropriate access to health data to drive individual and population health improvement

-Individual and population-level research, **practice**, and analysis are enhanced by health IT

-Researchers **and public health professionals** advance health equity by using health data that includes underrepresented groups

Thank you for your consideration.
