mCODE++: leveraging mCODE with possible extensions

mCODE STU 2

Click embedded links to see FHIR artifact definitions

This illustration is not a formal part of the mCODE specification. For brevity and clarity, names and structural relationships shown here may deviate from the specification.

CodeX Use-Cases

Discovery -> Planning -> Execution

<https://confluence.hl7.org/display/COD/CodeX+Use+Cases>

Oncology

-  mCODE++ Extraction
-  EHR Endpoints for Cancer Clinical Trials
(including, future extensions of the ICAREdata study)
-  Integrated Trial Matching for Cancer Patients and Providers
-  Cancer Registry Reporting
-  Radiation Therapy Treatment Data for Cancer
-  Prior Authorization in Oncology
-  Risk Evaluation and Mitigation Strategies (REMS)

Cardiovascular

-  CardX - Hypertension Management

Genomics

-  GenomeX - Genomics Data Exchange
-  GenomeX - Genomics Operations

98 CAP digital synoptic cancer reports with structured data elements and values. U.S. adoption rate 50%

The CAP electronic Cancer Checklists (eCC)

Introduction for CHCF

21st Century Cures Act: SDC on FHIR

SDC on FHIR for pathology

SDC specification provides a standard format to move synoptic pathology data captured in CAP eCC forms by utilizing **FHIR resources**

FHIR RESOURCES*

SDC data will be transmitted using **USCDI FHIR Resources**. The eCC Q&A data will be sent as **FHIR Observations** bundled with **Patient** demographics in a **DiagnosticReport attachment**.

TRANSMISSION FORMAT

The message will be transmitted as a **XML**. A **data dictionary of the CAP eCC templates** used to render the SDC XML is also available to aid data processing

SDC on FHIR Data Format at Hartford HealthCare

Implementation Considerations

Key Benefit

SDC on FHIR is an **emerging national standard** as part of ONC's CURES act whose implementation would **support future interoperability efforts** with other FHIR based systems

Key Limitation

FHIR messages adds technical complexity to store, queue and process data.

Dependency and Complexity

Vendor dependency. mTuitive vendor extracts eCC data but SDC is not yet part of their product and **will require partnership with HHC** to develop and launch.

Key Takeaways

- Cancer registry reporting is a component of system data architecture
- Health systems data is reliant on ITS vendor product integration
- Data liquidity requires data representation & transmission standards
- Common data models support data liquidity & data science
